

## BE PREPARED

The 92 Series Grillon multifuel boiler will burn most varieties of solid fuel or wood, and provide economic central heating which is independent of external energy sources.

Come snowdrifts or power-cuts, with a Grillon in the kitchen and the fuel you wisely laid in last summer, your home will be warm and snug.

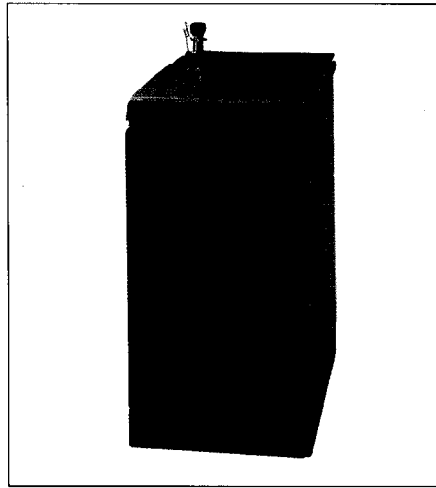

What is more, while neighbours search for their camping stoves during the first power-cut, your kettle will be simmering on the hob alongside a tasty casserole supper.

## OUTPUT

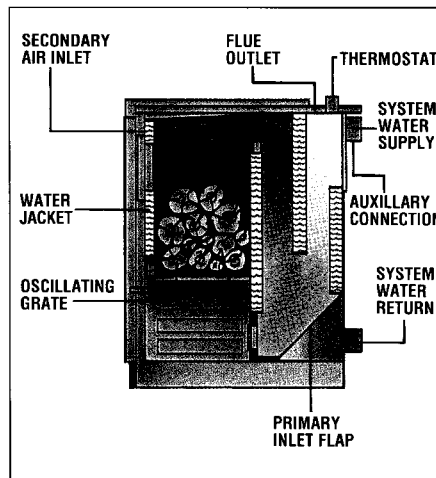

The 92 Series Grillon is available in three output sizes to provide 39,000, 57,000 and 77,000 Btu's an hour. The smallest will heat a two or three bedroom house and provide plentiful domestic hot water, the largest will adequately meet the needs of a much larger household.

## USER FRIENDLY

Designed for convenience, all Grillon boilers have an externally operated grate shaking mechanism to cleanly and simply

AVAILABLE IN WHITE OR AMBER

TECHNICAL FEATURES

clear ashes from the grate. A large capacity ashpan then stretches the intervals between further attention, and all the external surfaces are heavily enamelled, either white or amber, for easy wipe-down cleaning.

Thermostatic controls regulate the output and economy of all units to ensure that temperatures are maintained comfortably during the day and the system slumbers peacefully all night long.

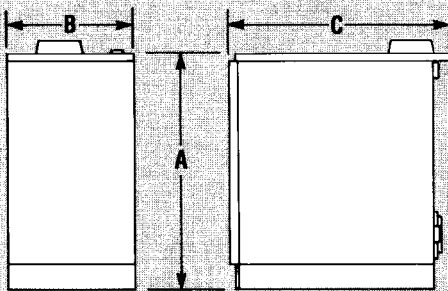

## A COOK-TOP TOO!

Concealed beneath the hinged insulated top cover of every Grillon kitchen boiler is a polished cast-iron hot plate. Equally capable of boiling a kettle or cooking a casserole this comes in very handy throughout the year and can be a wonderful standby in an emergency.

## FRANCO-BELGE - QUALITY ENGINEERING

All Franco-Belge boilers are ruggedly constructed to provide years of trouble free service. Both top quality cast-iron and heavy gauge steel plate are used throughout and the design reflects the company's many years experience in the manufacture of domestic heating products.

## OVERALL DIMENSIONS

	921-15-02	921-22-02	921-29-02
